INTRODUCTION

This is the second release of the publication, Yukon Energy Statistics. Data presented were derived from a number of sources including the Yukon Government, National Energy Board, Statistics Canada and private and public companies. Data presented are the most recent available as of October 1988.

An important step in the development of this publication was a thorough evaluation of primary and secondary data sources. Inconsistencies in data were traced to their respective sources and a complete reconciliation was performed in problem areas.

This publication is subdivided into two main parts. Part A provides a comprehensive look at electricity data in the territory ranging from plant operations to electricity prices. Part B focuses on petroleum products and time series data provided at the product level. The reader will note that petroleum product data by sector is not included. Sector data has not been published for reasons of confidentiality.

We would like to acknowledge and thank Yukon Electric and Yukon Energy Corporation for their cooperation and assistance in this project.
